JAVIER - REACT FRONTEND

https://devfjavier.github.io/PORTFOLIO/

PROFILE

Junior Frontend developer with experience on my own practice projects.

PRACTICE PROJECTS

Fake ecommerce: It has a shopping cart, it obtains its products from the Node/Express API, and App state is handled with React Redux.
Users can register with email, and they are stored in the MongoDB/Mongoose database.

Signal UI clone: It copies half of the UI, it has a basic global chat, it can switch between dark and light themes, and between spanish and english languages. App state is handled with Context API.

Spotify UI clone: It copies much of desktop and mobile UI, it does not have functionalities to play music.
It is built in Next.
